

## Confirmed mesothelioma diagnosis

### LLCG/VZN annotations

1. "Suitable for surgical multimodality treatment": Factors suggestive for surgical multimodality treatment NOT being beneficial for a particular MPM patient are sarcomatoid histology (pathology), multilevel chest wall infiltration (T-factor), contralateral mediastinal or supraclavicular lymph node involvement (N-factor), extrathoracic disease (M-factor), or inadequate cardiopulmonary reserve (functionality).
2. MPM patients, suitable for surgical multimodality treatment are preferably included in a Clinical Trial.
